**Site Access Improvement Standards**

---

The Access Manual provides the methodology and process to control access along State-owned roadway and facilities. Chapter 4 of the Technical Guidance, [Site Access Improvement Standards](#), identifies the site access improvements required to support proposed entrances and street connections. The function, applications, and geometric design of various site access improvements, including frontage improvements and turning lanes, are discussed in this chapter. The site access improvements required for different types of development projects, highway functions, and traffic conditions are specified in this chapter.
